Our Fab-Cut team wants you to have flexibility and to also offer you solutions to meet your needs. We offer custom gantry packages to replace existing out of date systems or you can fabricate your own table and we will supply you an all in one gantry kit that is ready to use when you receive it. All gantries include the linear side rail package to add to your table.

We offer 4', 5', 6' and 8' wide as standard sizes but we can also offer custom widths to meet your needs. The 4' wide are constructed out of HD 6061 aluminum and all larger sizes are constructed out of steel. The gantry systems are available with HD stepper or servo motor packages. Our motor packages all use a direct drive 4:1 gear box with the Nema 23 motors or 5:1 on our 8' wide gantries with Nema 34 motors.

### **Features and Benefits**

North American's #1 CAD/CAM/CNC software Std/Pro version 7.0 \*

Easy to learn and use

Plasma machine cut charts built into software

Easily import .dxf, .dwg, .png, .jpeg and .bmp drawings

Basic grid parts nesting

Torch Height Control (THC) standard

Linear rails with very smooth movement

Operates on 120 v

Use your own plasma or order one from us
